

Design Technology

Design and technology is an inspiring, rigorous and practical subject. Using creativity and imagination, children are encouraged to design and make products that solve real and relevant problems within a variety of contexts, considering their own and others, needs, wants and values. They acquire a broad range of subject knowledge and draw on prior learning and/or skills from subjects such as mathematics, science, computing and art. Pupils learn how to manipulate tools safely, becoming resourceful, innovative, enterprising and capable citizens. Through the evaluation of past and present design and technology, they develop a critical understanding of its impact on daily life and the wider world.

Children are given the opportunity to study different areas of modern living including food, textiles and construction techniques mainly via a topic based approach to learning. The school also runs a variety of termly lunchtime or afterschool clubs/activities that encourage children to learn new Design and Technology skills or to develop their existing skills.
